The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

## **Company information**

### Owner of the EPD: VÍTKOVICE STEEL, a. s.

Českobratrská 3321/46, 702 00 Ostrava - Moravská Ostrava, CZ

IČO: 27801454

Contact:

Gabriela Dylová. gabriela.dylova@vitkovicesteel.com, +420 736 132 844

#### **Description of the organisation:**

VÍTKOVICE STEEL a.s. is a leading European manufacturer of rolled steel products and the largest producer of steel sheets in the Czech Republic. The main production program consists of thick sheets, shaped blanks and sheet piles.

The company is the only manufacturer of so-called sheet piles in the Czech Republic and one of two manufacturers in the European Union. In the production of thick sheets, it benefits from a strong market share in the key domestic market. Product quality control according to ISO 17025 is carried out in its own accredited testing laboratories, which have state-of-the-art testing equipment that meets the highest standards

Since 2025, VÍTKOVICE STEEL, a.s. has become a member of the strong industrial group Jindal Steel International, which is moving towards green steel.

#### Product-related or management system-related certifications:

The quality of the products is ensured by an effective quality management system according to EN ISO 9001 and is in accordance with the technical regulations relating to the type of product. The manufacturer has implemented and certified the environmental management system EN ISO 14001 and the occupational health and safety management system ISO 45001 and the energy management system ISO 50001 by the certification company TÜV NORD CERT GmbH.

In accordance with EU Regulation 305/2011 on the placing on the market of construction products with the CE marking, a Declaration of Performance is issued for sheets manufactured according to standards EN 10025-2,-3,-4,-5 which are in accordance with the harmonized standard EN 10025-1 and for sheets according to EN 10343, which declares that the properties of the product are in accordance with the relevant harmonized technical specifications (hEN). The conformity assessment is carried out by the authorized body TÜV NORD Czech s.r.o.

The company also holds other product certificates issued by inspection bodies and certification bodies DNV LR, Deutsche Bahn HPQ (DBS 918 002-02) - certification for railway transport; certification documents for pressure equipment according to the Directive of the European Parliament and of the Council PED 2014/68/EU and the document AD 2000-Merkblatt W1/W10; also certification documents according to Bauregelliste A, part 1 for demonstrating product conformity for construction purposes and certification for the Great Britain market (UKCA, PESR).

#### Product quality documents according to EN 10204:

The quality management department issues the relevant inspection document (inspection certificate) with the chemical composition of the melt and the results of the material tests performed (e.g. ultrasound, mechanical tests) in accordance with the order:

- Test report "2.2"
- Inspection certificate "3.1"
- Inspection certificate "3.2"

Name and location of production site(s):

VÍTKOVICE STEEL, a. s.

Českobratrská 3321/46, 702 00 Ostrava - Moravská Ostrava, CZ

#### **Product information**

**Product name:** Thick rolled plate

**Product identification:** 

Product including any heat treatment.

#### **Product description:**

The sheets are made from continuously cast slabs. The sheet range is rolled in thicknesses of 5 - 150 mm (200 mm) and widths of 1000 - 3200 mm.

Condition of delivered sheets (heat treatment):

AR – after rolling (without heat treatment)

N – normalizing

NT – normalizing and tempering

A - soft annealing

M (TMCP) - thermomechanical rolling

#### STEEL SHEETS ACCORDING TO EN 10025-2 WITH "CE" MARKING

The most commonly used structural steels with a minimum yield strength of 235 MPa and guaranteed weldability, used for light steel structures of bridges, halls, parts of rail and motor vehicles, etc.

#### FINE-GRAIN STEEL SHEETS ACCORDING TO EN 10025-3 WITH "CE" MARKING

Structural steels with a guaranteed fine-grained structure and low carbon equivalent. Due to the minimum yield strength of up to 460 MPa and guaranteed impact work at a temperature of -50 °C, these steels are suitable for more demanding steel structures and their load-bearing elements. They are also suitable for railway and motor vehicle structures.

# THERMO-MECHANICALLY ROLLED FINE-GRAIN STEEL SHEETS ACCORDING TO EN 10025-4 WITH "CE" MARKING

Thermo-mechanically rolled sheets of structural steel with low carbon equivalent and thus excellent weldability. They are used for more demanding steel structures and their load-bearing elements. Impact work is guaranteed even at temperatures of -50 °C, which allows for a wide range of applications.

# STRUCTURAL STEEL SHEETS WITH INCREASED RESISTANCE TO ATMOSPHERIC CORROSION (ATMOFIX)

Unlike conventional steels, structural steel sheets with increased resistance to atmospheric corrosion do not require expensive surface treatments (coatings). They are characterized by increased resistance to the effects of an atmosphere containing sulfur. Their key application is in the field of bridge construction and building, but they can also be used for the construction of chimneys and flues.

#### THERMOMECHANICALLY ROLLED STEEL SHEETS ACCORDING TO EN 10149-2

The classic methods of processing these sheets are bending, flanging, profiling, etc. Upon agreement, the sheets can be delivered in a condition suitable for hot-dip galvanizing. They are excellently weldable due to their low carbon equivalent.

#### **NORMALIZED STEEL SHEETS ACCORDING TO EN 10149-3**

The sheets are technologically processed to ensure their suitability for cold forming. The classic methods of processing these sheets are bending, flanging, profiling, etc. Upon agreement, the sheets can be delivered in a condition suitable for hot-dip galvanizing.

Detailed information on individual products is available at https://www.vitkovicesteel.com/plechy/...

#### Product technical data

Informative basic properties of supplied thick sheets)

Length (max.) 16,000 mm

Width 1000 - 3200 mmThickness 5 - 150 (200) mm

#### Weight (max.) 15,000 kg

- a) All dimensions given are approximate; actual sheet dimensions depend on the combination of length, width and thickness as well as the material specification; for specific information please contact VÍTKOVICE STEEL, a. s.
- b) Longer lengths up to 21,000 mm upon agreement
- c) Longer thicknesses up to 200 mm upon agreement

#### Use:

- steel and bridge structures
- ships
- transport machinery and vehicles
- · abrasion-resistant sheets
- pressure vessels used at normal and elevated temperatures
- special military equipment
- sheets resistant to atmospheric corrosion
- shaped blanks
- pipelines
- offshore structures

#### UN CPC code:

41211 Flat-rolled products of non-alloy steel, not further worked than hot-rolled, of a width of 600 mm or more.

#### Geographical scope:

The generic data used from the Ecoinvent database are used with validity for the Czech Republic (e.g. energy inputs) and in the event that data for the Czech Republic are not available, data valid for the EU or according to the location of the supplier are used. Based on the evaluation according to EN 15804+A2, Annex E, tab. E.1 the generic data used meet the quality level - medium.

#### Product packaging:

The products are delivered in accordance with the standards indicated in the product description. The majority of products are stored on pallets with spacers for transport.

#### Environment and health during use

During the entire production process, it is not necessary to take any special health protection measures beyond the legally specified industrial protection measures for production employees.

#### LCA information

#### Functional unit / declared unit:

# The declared unit is 1 t of the average manufactured product – Thick rolled plate.

Product including any heat treatment.

Designation	Unit	Value
Declared unit	t	1
Conversion factor to 1 kg	kg	1000

#### Reference service life:

The reference service life of the elements is also not declared due to the unavailability of representative data on operating conditions during the product's use phase.

#### Time representativeness:

For specific data, the manufacturer's data for the **year 2024** is used. For generic data, data from the Ecoinvent database version 3.11 is used. Based on the evaluation according to EN 15804+A2, Annex E, tab. E.1 the generic data used meet the quality level - <u>very good</u>.

#### Database(s) and LCA software used:

SimaPro Craft calculation software, version 10.2, Ecoinvent database version 3.11.

GWP-GHG from electricity production: 0.526 kg CO2 eq/kWh (CZ residual mix).

#### **Description of system boundaries:**

"Cradle to gate with options, modules C1–C4, module D and with optional modules"

#### The production phase includes the following modules:

- A1 extraction and processing of raw materials and production of packaging from input raw materials
- A2 transport of input raw materials from the supplier to the manufacturer, waste removal
- A3 production of products, production of auxiliary materials and semi-finished products, energy consumption, including waste processing until reaching a state where it ceases to be waste or after removal of the last material residues during the production phase.
   Results A1-A3 include a "compensation report" of biogenic CO<sub>2</sub> from packaging released in module A5, as module A5 is not fully included.

#### The construction phase includes the following modules:

 A4 - transport to the construction site. Transport is carried out by truck with a capacity of 16 - 32 t (EURO 6). Transport of the declared product unit over a distance of 1 km is considered.

#### The end-of-life phase includes modules:

- C1, deconstruction, demolition; of a product from a building including its dismantling or demolition, including the initial sorting of materials at the construction site. The decomposition and/or dismantling of the product is part of the deconstruction of the building. In this case, it is assumed that the total energy required for dismantling is 78.45 MJ (for 1 DJ).
- C2, transport to the waste processing site; transport of the discarded product as part of waste processing, e.g. to a recycling site, and transport of waste, e.g. to a final disposal site.
   Transport from the dismantled building is carried out by a truck with a load capacity of 16-32 t (EURO 6) to an inert material landfill as a mixed building demolition or to a recycling center, the estimated transport distance according to calculations is 25 km.
- C3, waste treatment for reuse, recovery and/or recycling; e.g. collection of waste fractions from deconstruction, and treatment of waste from material streams intended for reuse (0%), recycling (100% of the product) and energy recovery (wooden interlayers from packaging). The burdens from sorting and the necessary treatment for further use are included. This

includes treatment by crushing wood from interlayers, flue gases from energy recovery. The burdens associated with the disposal of product packaging components are also included here

• **C4, w**aste disposal including pre-treatment and site management. Landfilling of the product or packaging is not considered.

# Benefits and costs beyond the product system boundary are presented in module D. Module D includes:

D, potential for reuse, recovery and/or recycling, expressed in net impacts or benefits. In the
module D scenario, the saving of primary raw material inputs (pig iron production, excluding
transport and energy) in another product system is taken into account. Benefits from energy
recovery (wood, EEE, EET) are considered.

#### Production:

The products are made from imported steel billets called slabs; the manufacturer Vítkovice Steel does not add any other components to the product. After preheating, the slabs enter the rolling mill, where sheets with a thickness of 5-100 mm (200 mm) and a width of 1000-3200 mm are rolled in several passes.

#### System diagram:

#### More information:

Information module **A5** from the construction phase was not included in the LCA due to the difficult availability of input data and is therefore not declared.

Information modules from the use phase **B1 to B7** are also not declared, as these types of products, assuming correct use, do not require maintenance, repair or replacement during the normal life time in the use phase. They also do not require energy or water consumption during the use phase.

For the study, all operational data related to the consumption of main and auxiliary materials for the production of the product, energy data, diesel consumption and the distribution of annual waste production and emissions according to plant records were taken. In terms of produced waste, only those wastes that are clearly related to production activities were included in the analysis.

The processes required for the installation of production equipment and the construction of infrastructure were not included in the analysis. Also, administrative processes are not included – inputs and outputs are balanced per production phase.

# Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results)::

Variation – sites		0 %				-	-	-	-	-	-	•	-	-	-	-	-

The data used to calculate the EPD conforms to the following principles:

**Technological point of view**: Data corresponding to the current production of individual types of partial products of the plant and corresponding to the current state of the technologies used are used.

Based on the evaluation according to EN 15804+A2, Annex E, tab. E.1 the generic data used meet the quality level - <u>very good</u>.

The aspect of completeness and completeness: Most of the input data is based on consumption balances, which are precisely recorded in the manufacturer's information system. The reliability of the source of specific data is determined by the uniformity of the collection methodology of the information system.

**Consistency point of view**: Uniform points of view are used throughout the report (allocation rules, age of data, technological scope of validity, temporal scope of validity, geographical scope of validity).

Credibility aspect: All important data were checked for adherence to cross-comparison of mass balances.

The GWP-GHG variability between the sub-products included (see Product Description) is less than 10%. Production takes place at only one production site.

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

The result tables shall only contain values or the letters "ND" (Not Declared). It is not possible to specify ND for mandatory indicators. ND shall only be used for voluntary parameters that are not quantified because no data is available.

## Other environmental performance indicators

---

# **Additional environmental information**

---

# Differences versus previous versions

This is the first version of the EPD according to EN 15804:2012+A2:2019/AC:2021.

# **ABBREVIATIONS**

Abbreviation	Definition											
General abbreviations												
EN	European standard											
EPD	Environmental product declaration											
EF	Environmental footprint											
GPI	General guidelines for the environmental labelling program (in the Czech Republic – NPEZ)											
ISO	International Organization for Standardization											
LCA	Life cycle assessment											
LCI	Life cycle inventory analysis											
LCIA	Life cycle impact assessment											
DJ / DU	Declared unit											
ILCD	International Reference Life cycle data system											
PCR	Product category rules											
c-PCR	Additional rules for product categories											
PRICE	European Committee for Standardization											
CPC	Central Product Classification (Central Product Classification)											
GHS	Globally Harmonized System of Classification and Labelling of Chemicals											
GRI	Global Reporting Initiative											
National	Undeclared											
Environmental impact in	icators (EN 15804)											
Greenhouse gas	a gas in the atmosphere that absorbs and emits infrared radiation, thereby contributing to the warming of the planet (CO <sub>2</sub> , CH <sub>4</sub> , N <sub>2</sub> O and others)											
GWP	Global warming potential (kg CO 2 eq .)											
GWP-fossil	Global warming potential from fossil fuels (kg CO <sub>2</sub> eq .)											
GWP-biogenic	Global warming potential from biogenic sources (kg CO <sub>2</sub> eq .)											
GWP- luluc	Global warming potential due to land use and land use change (kg CO $_2$ (eq $_2$ )											
ODP	Stratospheric ozone depletion potential (kg CFC-11 equivalent)											
AP	Acidification potential, cumulative exceedance (mol H <sup>+</sup> (eq .)											
EP	Eutrophication potential											
EP-freshwater	Freshwater eutrophication potential (kg P eq .)											
EP-seawater	Seawater eutrophication potential (kg N eq .)											
EP-soils	Land eutrophication potential (mol N eq .)											
POCP	Ground-level ozone formation potential (kg NMVOC equivalent)											
ADP	Potential for resource/raw material depletion											
ADP - minerals and metals	Potential for depletion of non-fossil resources/raw materials (kg Sb equivalent )											
ADP-fossil	Fossil resource/raw material depletion potential (MJ)											
WDP	Water shortage potential (m³)											
Additional environmenta	l impact indicators (EN 15804)											
GWP-GHG	Global warming potential for greenhouse gases (kg CO $_2$ eq .). The indicator includes all greenhouse gases except biogenic uptake and emissions of carbon dioxide and biogenic carbon stored in the product; as such, the indicator is identical to GWP- total except that the CF for biogenic CO2 $_{\rm is}$ set to zero.

	B5				
	B6	Operating energy consumption			

Abbreviation	Definition		
B7	Operating water consumption		
C1	Deconstruction / Demolition		
C2	Transportation to the waste processing site		
C3	Waste treatment for reuse, recovery and/or recycling		
C4	Removal		
D	Reuse, recovery and recycling potential		
Other relevant terms			
Substances of Very High Concern (SVHC)	Substances of very high concern		
CAS number	An internationally recognized unique numerical code used in chemistry for chemical substances		
CF	Characterization factor		
RSL	Reference life span		
MJ	Megajoule		
kg	Kilogram		
m³	Cubic meter		
NMVOC	methane volatile organic compounds		
Sat eq .	Antimony equivalents		
P eq .	Phosphorus equivalents		
Not equal .	Nitrogen equivalents		
Equivalent to CFC-11	Chlorofluorocarbon-11 equivalents		
CO 2 equivalent	Carbon dioxide equivalents		
kg C	Kilograms of carbon		
kg CO <sub>2</sub> eq .	Kilograms of carbon dioxide equivalent		
ОТЕ	OTE, as (in the Czech Republic) – energy market operator
